

# INTERZONE

A new idea to build a social network based on DASH's revolutionary masternode technology.

Interzone is a fork of DASH with the rock-solid CPU/GPU mintable C11 algorithm from Quark/Chaincoin. Interzone offers fast 90-second transactions, low fees, scalable block sizes, automatic checkpointing, Darksend (we call it Perplexion) for truly anonymous transactions, masternodes (we call them NetworkNodes), and easy mining with our in-client one-click SimpleMint system.

NetworkNodes take center stage on the Interzone network, offering 25% of block rewards blocks 20,000 through block 250,000 and 50% block rewards after. Interzone aims to build on the masternode technology and integrate customizable attributes to allow node-holders to add avatars, messaging, and other customizations to their node listings. Building a community of decentralized nodes strengthens the network and we encourage node creation with a low 5000 ITZ entry point to secure a node.

Our plan is to enhance masternodes and transform the Interzone network in to a decentralized social networking engine. Encrypted messaging, customizable clients, and a community based social network. We're working to build Mastodon.social in to our client for decentralized microblogging and groups. Eventually your NetworkNode will be your digital home on the Interzone blockchain!

## Technical Details

- 2% Token Preallocation in block #1 (overtaken by block-rewards by block #21,000)
- Instamine protection: 0.01 ITZ per block until block 1000
- 23,000,000 total tokens over 10 years provides a stable Proof of Work with low inflation
- 23 ITZ Tokens Per Block halving at 500,000 block intervals (~1.5 years)
- 90 second transactions with 6 confirm blocks
- Genesis block minted during UTC totality of the solar eclipse 8/21/2017
- 5000 tokens per masternode
- Community driven 25% masternode rewards blocks 20,000 through block 250,000 and 50% rewards ongoing afterward
- ASIC-resistant in-client one-click minting with CPU centric algorithm and GPU mining via third party miners

## Preallocation Details

2% or 460,000 ITZ tokens were preallocated in block 1. These tokens are to be distributed as so:

- 50,000 ITZ to create initial Interzone NetworkNodes
- 250,000 ITZ for the Interzone Early Access Program

- 60,000 ITZ for promotional activities (faucets, airdrops, translations, etc)
- 100,000 ITZ for long-term development

## Timeline

- Now-Block 1000: Early Access Program
- Block 1000: Main Net Client Release
- Q1 2018: GUI Client Updates with Encrypted Messaging
- Q2 2018: GUI Client Updates with Mastodon Decentralized Social Network Client
- Q4 2018: First Rewards Halving
